Electrical Power & Energy Systems

Index to Volume 1: 1979

Author

Aoki, F, Akimoto, Y, Uemura, K and Sakaguchi T Digitalized control system with simultaneous data sampling and fault protection 166

Backlund, Y and Bubenko, J A Computer-aided distribution system planning 35

Brandwajn, V and Dommel, H W Simulation of turbine generators in electromagnetic transients programs 118

Carpentier, J Optimal power flows 3

Cheong, H K and Dillon, T S A bounded-set theoretical approach to reliability modelling and calculations for composite generation-transmission systems including systems with unconventional energy sources 95

Côté, G and Laughton, M A Decomposition techniques in power system planning: the Benders partitioning method 57

Di Caprio, U and Marconato, R Automatic load shedding in multiarea elastic power systems 21

Dodu, J C and Merlin, A Recent improvements of the Mexico model for probabilistic planning studies 46

Edwin, K W Research and development in power system computation in the FRG 199

El-Amin, I M, Yacamini, R and Brameller, A AC-HVDC solution and security assessment using a diakoptical method 175

Garabedian, V and Meslier, F The Greta model: a decision-making tool for operation and planning of generation systems at EDF 83

Grujić, Lj T and Ribbens-Pavella, M Asymptotic stability of large-scale systems with application to power systems. Part 1: Domain estimation 151

Grujić, Lj T, Ribbens-Pavella, M and Bouffioux, A Asymptotic stability of large-scale systems with application to power systems. Part 2: Transient analysis 158

Handschin, E, Grafoner, P and Grebe, E Contingency analysis using dynamic power-system simulation: Part 1 107

Jervis, P Design of microprocessor-based control and instrumentation networks 125

Klos, A and Borkowska, B Equivalent transfiguration of networks 30

Lee, K Y and Hossain, S A A real-time predictive controller for automatic voltage regulation of a synchronous generator 181

Patton, A D, Ayoub, A K and Singh, C Power system reliability evaluation 139

Quazza, G Power system computing in ENEL research and development programmes 65

Suzuki, H *et al.* Midterm stability analysis of a multimachine system by the frequency response method 16

van Meeteren, H P Fast decoupled state-estimator with linear models 187

Venikov, V A, Zelenokhat, N I, Shakaryan, Y G and Sukhanov, L A Application of digital computers to the study of power systems with asynchronized electromechanical frequency converters 113

Vèrité, J C Computation of eddy currents on the alternator output conductors by a finite element method 193

Title

A bounded-set theoretical approach to reliability modelling and calculations for composite generation-transmission systems including systems with unconventional energy sources **Cheong, H K and Dillon, T S** 95

AC-HVDC solution and security assessment using a diakoptical method **El-Amin, I M, Yacamini, R and Brameller, A** 175

Application of digital computers to the study of power systems with asynchronized electromechanical frequency converters **Venikov, V A, Zelenokhat, NI, Shakaryan, Y G and Sukhanov, L A** 113

A real-time predictive controller for automatic voltage regulation of a synchronous generator **Lee, K Y and Hossain, S A** 181

Asymptotic stability of large-scale systems with application to power systems: Part 1: Domain estimation **Grujić, Lj T and Ribbens-Pavella, M** 151

Asymptotic stability of large-scale systems with application to power systems: Part 2: Transient analysis **Grujić, Lj T, Ribbens-Pavella, M and Bouffioux, A** 158

Automatic load shedding in multiarea elastic power systems **Di Caprio, U and Marconato, R** 21

Computation of eddy currents on the alternator output conductors by a finite element method **Vèrité, J C** 193

Computer-aided distribution system planning **Backlund, Y and Bubenko, J A** 35

Contingency analysis using dynamic power-system simulation: Part 1 **Handschin, E, Grafoner, P and Grebe, E** 107

Decomposition techniques in power system planning: the Benders partitioning method **Côté, G and Laughton, M A** 57

Design of microprocessor-based control and instrumentation networks **Jervis, P** 125

Digitalized control system with simultaneous data sampling and fault protection **Aoki, F, Akimoto, Y, Uemura, K and Sakaguchi, T** 166

Equivalent transfiguration of networks **Klos, A and Borkowska, B** 30

Fast decoupled state-estimator with linear models **van Meeteren, H P** 187

Midterm stability analysis of a multimachine system by the frequency response method **Suzuki, H *et al.*** 16

Optimal power flows **Carpentier, J** 3

Power system computing in ENEL research and development programmes **Quazza, G** 65

Power system reliability evaluation **Patton, A D, Ayoub, A K and Singh, C** 139

Recent improvement of the Mexico model for probabilistic planning studies **Dodu, J C and Merlin, A** 46

Research and development in power system computation in the FRG **Edwin, K W** 199

Simulation of turbine generators in electromagnetic transients programs **Brandwajn, V and Dommel, H W** 118

The Greta model: a decision-making tool for operation and planning of generation systems at EDF **Garabedian V and Meslier, F** 83
